# COST MANAGEMENT

Manage and allocate costs, optimize spending, and save money.

During the shift to the cloud, organizations often find costs escalating, with little accountability or transparency. Complete visibility, automated reporting and alerts, and customizable billing and invoicing help simplify business operations while increasing profitability. CloudCheckr delivers everything you need to manage expenses and reduce overspending. Make sense of every billing detail and allocate costs to keep expenses transparent.

ADVANCED AUTOMATION

Take the guesswork out of managing your cloud.

There are millions of things happening at once in the cloud. But much of that activity is out of sight, making it impossible to control without intelligent automation. Our cloud management platform brings clarity to the chaos by dynamically automating billing, cost allocation, utilization, security monitoring, analytics and reporting. Gain a unified view of your entire cloud ecosystem, allowing you to manage your cloud at scale and keep complexity in check.

CLOUD SECURITY

Unified secure configuration, activity monitoring, and IAM tracking.

Cybersecurity risks don't go away when you move to the cloud. They take on a whole new dimension, with user access misconfigurations and other vulnerabilities. CloudCheckr monitors and maintains control of your cloud's security and compliance posture. With unified secure configuration, activity monitoring, reports, and automated alerts, CloudCheckr provides confidence that your cloud is stable, secure, and fully compliant.

TOTAL COMPLIANCE

Ensure your cloud is audit-ready for 35 regulatory standards.

Take the next step in cloud security. It can be hard to track the status of multiple individual regulations—HIPAA, PCI DSS, DFARS, and more—yet that is precisely what is required to ensure compliance. Total Compliance in CloudCheckr presents both a point-in-time score for over thirty regulations as well as historical graphs showing the organization's progress towards completeness. The goal, naturally, is to get to 100% and to stay there.
