Product Overview

eMAM is a powerful web–based media asset management system used by leading organizations for over a decade. eMAM builds a library of lightweight proxy copies for quick and easy worldwide access and collaboration. With dozens of integrated technology partners and extensive built–in tools and settings, eMAM has the power, flexibility, and scalability to meet your particular needs.

eMAM Preserve Service

The eMAM Preserve Service gives you web access to AI tagged proxy copies of all your media. You can search, browse, and share and then securely download needed content.

- Upload your media from any internet connection. The system will automatically create lightweight proxy copies for easier use, securing the original media in archive storage
- Search using AI tags and transcripts from Amazon Rekognition and Amazon Transcribe
- Organize media into categories and subcategories, so you can control access and permissions
- Search, browse, and preview media. Send an email link for others to view
- Download needed media

eMAM Create Service

The eMAM Create Service allows editors, artists, and others to collaborate worldwide. You can collaborate from the web interface, while editors and artists can use integrated Adobe Creative Cloud applications (Premiere, After Effects, Photoshop, Illustrator, and InDesign).

- Ingest, organize, and search media as done in the Preserve Service.
- Use the web interface to find clips, mark, sub-clip, and build a timeline.
- Editors can use their system to download native resolution or proxy editing versions and send review/approval links
- Finished projects can be checked back into the system for sharing

Visit AWS Marketplace to subscribe to eMAM. Monthly billing or discounted long-term options are available.

Power and Control Have Never Been So Easy...
